

Internship Project Report

Submitted By:

Aima Jahangir

Internship Organization:

NovaSol Technologies

Department:

Web Development

Technologies Used:

HTML5, CSS3

Submission Date:

8th July 2026

Chapter 1

- **Grid Garden Level 10 screenshot**

EXPLANATION

This screenshot demonstrates the successful completion of Level 10 of the CSS Grid Garden training exercise. Through this practice activity, I learned the foundational concepts of CSS Grid positioning, including grid columns, rows, alignment behavior, and item spanning techniques. The exercise improved my understanding of how modern responsive layouts are structured and arranged programmatically using CSS Grid properties.

Chapter 2

- Fixed Phase 1 card screenshot

EXPLANATION

This screenshot displays the corrected version of the broken profile card layout provided during Phase 1 of the project. Multiple layout issues were identified and resolved, including overlapping elements, improper positioning behavior, invisible text styling, and broken structural flow. Modern CSS styling techniques such as Flexbox alignment, spacing optimization, responsive sizing, and visual enhancements were implemented to produce a clean and professional user interface.

Chapter 3

- **Final Bento Grid screenshot**

EXPLANATION

This screenshot presents the completed Bento Grid Profile Link Page developed during Phase 2 of the project. The interface was built using modern CSS Grid layout systems with responsive viewport behavior implemented through media queries. Different grid column spans were configured to create a visually balanced dashboard-style layout. Additional frontend enhancements including card shadows, rounded borders, responsive stacking behavior, active navigation links, and modern UI styling principles were applied to create a professional and user-friendly experience across desktop and mobile devices.

GITHUB

The screenshot shows the GitHub interface for the repository **novasol-bento-grid**, which is public. At the top, there are buttons for 'Pin' and 'Watch' (0). Below the repository name, it shows the 'main' branch with 1 branch and 0 tags. A search bar labeled 'Go to file' and buttons for 'Add file' and 'Code' are present. The commit history is displayed, showing a commit by **AimaJahangir** titled 'Update project link to point to live site' with a green checkmark, commit hash **4a0db71**, and '1 hour ago' with '2 Commits'. The file list includes:

File	Commit Message	Time
images	Initial commit: Completed Bento Grid Profile layout	1 hour ago
screenshots	Initial commit: Completed Bento Grid Profile layout	1 hour ago
app.css	Initial commit: Completed Bento Grid Profile layout	1 hour ago
broken-card.html	Initial commit: Completed Bento Grid Profile layout	1 hour ago
index.html	Update project link to point to live site	1 hour ago
style.css	Initial commit: Completed Bento Grid Profile layout	1 hour ago

NETLIFY DEPLOYMENT

The screenshot shows the Netlify deployment page for the project **aima-bento**. It features a preview of the website, which includes a profile for **Aima Khan** with sections for 'About Me', 'Skills', 'Projects', and 'Social Links'. The deployment status shows **aima-bento.netlify.app** with the note 'Deploys from GitHub.' and 'Published at 8:28 PM.' A 'Quick setup' button is visible. Below this, there is a section titled 'Build with an AI agent' with a 'New' tag, and options for 'Prompt templates' and 'Project context'. A text box prompts the user to 'Ask an agent to create a new page, build a dashboard, update an article, etc. Review, iterate and share.' At the bottom, there is a dropdown menu for 'Claude Agent', a microphone icon, a link icon, and a 'Run task' button. A footer note states: 'The agent publishes changes in a preview - your live site won't change. Learn more.'

CONCLUSION

Through this milestone project, I gained practical experience in frontend layout engineering, responsive web design principles, CSS Grid systems, and debugging real-world interface styling issues. This project strengthened my understanding of building adaptive and visually structured web interfaces using modern frontend development practices.
